

**Expert hot tub water care system - all in one box - just one step**

- Removes slime layer and greasy feeling\*
- Reduces the need for chlorine or other harsh chemicals\*
- Maintains steady pH levels\*
- Extends the life of your equipment up to 3 times longer\*
- Tested and approved by KEMA institute

\* when used as directed

**CAUTION: KEEP OUT OF REACH OF CHILDREN****DIRECTIONS FOR USE**

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING. USE ONLY AS DIRECTED.

DO NOT MIX AQUAFINESSE™ IN COMBINATION WITH ANY OTHER HOT TUB SANITIZING PRODUCT AS IT MAY CAUSE AVERSE AFFECTS

SHAKE WELL BEFORE USE – read instructions carefully

**APPLICATION INSTRUCTIONS:**

1. Drain hot tub completely. Run garden hose for 60 seconds before filling the tub with fresh tap water.
2. Shake the bottle of AquaFinesse™ to mix the solution. Pour the correct amount of AquaFinesse™ (as indicated on the bottle) into the water. Do NOT overdose.
3. Turn on the jets for a minimum of 2 minutes to activate the AquaFinesse™ water care system.
4. Place (1) sanitizer tablet in the slow-release dispenser, close cap, fill with water and place dispenser directly on the top of the filter (basket). Check dispenser every week to make sure tablets are intact. For tubs with functioning ozone or silver ion systems, the use of sanitizing tablets may not be required.
5. Repeat steps 2 - 4 on a set day, every week.
6. Clean filter once a week to ensure total sanitation.
7. Ensure your ozonator is working properly. Perform regular maintenance of your ozone system and consult your dealer if you think the ozone system needs repair

**STATEMENTS OF PRACTICAL TREATMENT (First Aid):**

If swallowed: Drink promptly large quantities of water. Do not induce vomiting. Avoid alcohol. Call a physician or poison control center immediately.

If in Eyes: Hold eyelids open and flush with a steady gentle stream of water for 15 minutes. If wearing contacts, flush with water for 5 minutes, remove contacts and flush eyes for 10 more minutes. Consult a doctor immediately.

**STORAGE AND DISPOSAL**

Store AquaFinesse™ in a cool dry space away from extreme heat or cold temperatures. **MUST BE STORED IN ITS ORIGINAL CONTAINER, KEEP OUT OF REACH OF CHILDREN.** If bottle is empty, discard in trash or offer for recycling if available.

**TROUBLESHOOTING****IMPORTANT:**

The AquaFinesse™ system ensures pure clean water and releases old dirt, calcium and scale build up from pipes and equipment inside your hot tub. This process may cause water to appear cloudy during the first few weeks of use. Continue using product as directed; after this process is repeated 2 or 3 times, your water will be clear, clean and free of any greasy or slimy feeling.

**IF YOU CONTINUE TO EXPERIENCE CLOUDY WATER:**

1. Clean your filter more frequently.
2. Check if sanitizing tablet is in the slow-release dispenser (if applicable).
3. Open all jets and activate them for five minutes to catch all dirt in the filter
4. Change water every three months.

**Suggestions:**

- purchase an additional filter element and rotate filters regularly
- take a simple shower before taking a hot tub bath
- do not use oil-based salts or smelling agents

## FREQUENTLY ASKED QUESTIONS:

AQUA FINESSE™

## FREQUENTLY ASKED QUESTIONS:

**How often should I clean the filters in my hot tub?**

AquaFinesse™ works very closely with your tub's filtration system to ensure total water sanitation. We recommend cleaning the filters twice a week for the first two weeks. After the initial conditioning period, you should clean or rotate your filters on a weekly basis. For easier maintenance, we also recommend that you purchase back-up filters and rotate them regularly.

**What's the best way to clean the filters?**

For weekly maintenance, remove the filters from the tub and rinse them completely using the garden hose. Once a month, soak the filter(s) in a bucket using a filtercleaner and rinse off filters before reuse. Always allow the filter(s) to dry completely before reinserting them into the tub.

**How often should I use AquaFinesse™ to clean my hot tub water?**

Use AquaFinesse™ as directed once a week. Set a specific day for this. Do NOT overdose. The sanitizing tablet should be replaced in its dispenser as soon as it has dissolved (approximately 7 to 10 days).

**What happens if I overdose my hot tub with AquaFinesse™?**

If an overdose occurs, you must completely drain and refill your hot tub and make sure you thoroughly clean the filters before re-inserting them. Always make sure you do not overdose.

**How often should I change the spa water?**

We recommend changing your water every three to four months. You can also use our test strips to measure whether or not the water needs refreshing. Another good system is to refresh your water each time you purchase a new box of AquaFinesse™.

**Is it safe to drain the water into my lawn?**

Yes, AquaFinesse™ is environmentally friendly so will not damage your garden, grass or household pets.

**Can I use aromatherapy products with AquaFinesse™?**

Yes, as long as the products you use are crystal or salt based and do not contain oils or other liquids.

## FREQUENTLY ASKED QUESTIONS:

**What is AquaFinesse™?**

AquaFinesse™ is a completely different spa maintenance alternative to chlorine or bromine. We provide clean, clear and odor-free water with only one dose per week! AquaFinesse™ also softens hot tub water by eliminating calcium and scale build-up from the tub's equipment. Our product not only makes your life easier, it also extends the lifetime of your hot tub up to three times longer than with the use of traditional sanitizers!

It is recommended that hot tub owners maintain a minimum chlorine level of 1.5ppm in the spa water. To meet these standards, we strongly suggest using the supplied sanitizing tablets in the slow-release dispenser as directed.

**How is AquaFinesse™ supplied?**

AquaFinesse™ comes in a convenient carrying case that contains everything you need for up to 6 months of effective spa water treatment! The box contains two bottles of our patented AquaFinesse™ solution, a graduated measuring cup, sanitizing tablets, slow release dispenser and instruction card with Frequently Asked Questions (FAQs).

**Can I use AquaFinesse™ in any hot tub - old or new?**

AquaFinesse™ works beautifully with all tubs as long as the tub has an effective filtration system, removable/cleanable filters and a means of providing water circulation through the filters for at least 4 hours a day.

**Can I use AquaFinesse™ in a spa with water that already has chlorine or bromine in it?**

If the spa has just been emptied and refilled with fresh water, you can immediately switch to AquaFinesse™. For a spa that has been sanitized with chlorine or bromine for more than one week, you must drain 1/3 of the spa and refill it with new water before using AquaFinesse™.

**How do I use AquaFinesse™?**

Take one bottle from the carrying case and consult the label for your recommended weekly dose. Shake well and use the measuring cup to pour the directed amount of AquaFinesse™ into the spa water. Turn on the jets and leave them running for at least two minutes to fully incorporate the solution.

When used in combination with a good working ozone or silver ion system, no additional sanitizers are needed. However, the National Spa and Pool Institute (NSPI) recommends that hot tub owners maintain a minimum level of 1.5-ppm chlorine in the spa water. To meet these standards, we strongly suggest using the provided sanitizing tablets as directed in the slow-release dispenser.

## FREQUENTLY ASKED QUESTIONS:

To use the sanitizing tablets: place one AquaFinesse™ sanitizing tablet into the dispenser, secure cap and place dispenser on top of the water filter (or in the basket). Allow the dispenser to fill with water. Before using your tub, ensure that the dispenser is placed in the filter and working properly.

**Do I need to "shock" the spa water before starting the AquaFinesse™ system?**

No, it is not necessary to "shock" your water before starting the AquaFinesse™ system. However, there are certain situations in which we recommend a chlorine shock. With brand new tubs, we suggest "shocking" the water after you've filled the spa for the first time. If you also have concerns about the quality of your water supply, you can "shock" the water before starting with AquaFinesse™. **YOU MUST WAIT 4-6 HOURS AFTER "SHOCKING" BEFORE USING AQUAFINESSE™.**

**What do the sanitizing tablets do?**

A small chlorine-based tablet is used in conjunction with our slow-release dispenser to kill all the bacteria from your tub after it's captured in the filter. The amount of residual chlorine remaining in your spa water is very minimal. This small dose significantly reduces unpleasant smells, dryness or bleaching effects typically associated with chemicals.

NOTE: The National Spa and Pool Institute (NSPI) recommends that hot tub owners maintain a minimum level of 1.5-ppm chlorine in the spa water.

**I just started with AquaFinesse™ and my water is dirty and cloudy - what am I doing wrong?**

Nothing! In fact it's a sign that the AquaFinesse™ is working properly to recondition your spa water and equipment. If your spa is older than six months, a considerable amount of calcium and scale buildup will be released by AquaFinesse™ and flushed into your spa.

During this reconditioning period, we recommend that you clean your filter(s) twice a week. This helps to ensure that clean and clear water is flowing through your hot tub. When spa is not in use, ensure that the valves, jets and water features are open and water is allowed to flow through them. Soon your water will be soft and odor-free without feeling slimy or greasy!

**DO NOT ENTER HOT TUB  
IF YOU CANNOT SEE THE  
BOTTOM OF THE TUB.**
